For licensed broker-dealers, wealth managers, and placement agents

Distribute short-duration, institutional yield to your clients

Offer qualified clients 1-to-14-day cross-border receivable tranches backed by bankruptcy-remote SPVs and automated compliance.

Why distribution partners list Eko Securities Exchange tranches

- **High-turnover short-duration product:** Institutional treasuries, family offices, and high-net-worth clients constantly seek liquid, short-dated (1–14 day) yield instruments backed by real cross-border payment flows rather than multi-year illiquid credit.
- **Native stablecoin or bank-wire onboarding:** Pools settle natively in regulated stablecoins (USDC / EURC), while clients holding idle USD or EUR bank balances can subscribe seamlessly via integrated fiat-to-stablecoin mint partners.
- **Recurring placement and distribution fees:** Earn transparent placement, origination, and secondary distribution fees across every 1-to-14-day rollover cycle, generating compounding fee revenue on a single client allocation.

Federated compliance and integration architecture

Capability	How Eko Securities Exchange supports broker-dealers
Federated KYC/AML	Once your firm completes institutional partner onboarding, your verified KYC/AML attestations plug directly into the exchange's IIdentityRegistry.sol via zero-knowledge (ZK) jurisdiction proofs, eliminating duplicate client onboarding.
Programmatic rules	ERC-3643 and ERC-1400 token hooks enforce accreditation, sanctions screening, and regional offering rules (e.g., ECOWAS, Reg D, Reg S) automatically prior to every primary subscription or secondary trade.
Flexible connectivity	Integrate via REST APIs into your existing wealth/trading platform, or allocate directly through the exchange's institutional web portal and block-trade desk with T+0 atomic DvP settlement.

Next step for brokers: Email us at hello@ekosecurities.com to apply to become a distribution partner.
