For banking-as-a-service (BaaS) platforms and cloud ERP providers

Embed one-click working capital directly into your platform

Power instant T+0 liquidity for PSPs today (phase 1) and B2B exporters/enterprises on 30–90 day invoice terms (phase 2) via a single API.

Unified API architecture across phase 1 and phase 2

The exchange's modular API and Integration Layer and Risk and Eligibility Layer let BaaS providers and cloud ERP platforms offer embedded receivables financing without taking balance-sheet credit risk:

- **Phase 1 (live, BaaS and payment platforms):** Stream verified 1-to-14-day cross-border payment settlement events via read-only API so your PSP and fintech clients unlock 80%–90% T+0 working capital advances (settled in USDC/EURC or off-ramped fiat).
- **Phase 2 (roadmap, cloud ERPs and trade platforms):** Stream approved 30-to-90-day B2B corporate and export invoices directly from cloud ERPs (such as NetSuite, SAP, or Xero) onto the exchange's exact same true-sale SPV, SHA-256 deduplication, and DACA collection rails.
- **Zero balance-sheet risk for partners:** Receivables are sold via perfected true sale to bankruptcy-remote SPVs and funded by global liquidity providers on Eko Securities Exchange, never your balance sheet.

Partner integration and revenue model

Feature	Platform partner benefit
One-click embedded UX	Surface real-time dynamic advance rates and borrowing-base eligibility natively inside your existing BaaS dashboard or ERP invoicing screen.
Recurring partner fees	Earn recurring origination, API data-verification, and volume-share fees every time your customers finance a settlement batch or invoice.
End-to-end automation	Eko Securities Exchange handles KYB/KYC compliance, SHA-256 fingerprinting, SPV assignment, investor matching, DACA lockbox routing, and waterfall repayment automatically.

Next step for ERP and BaaS partners: Email us at hello@ekosecurities.com to talk about integrating with the exchange and sharing revenue.
